

SHS-CVR

Clean Room Cover for SHS-6T2 Speaker Install Sheet

The AtlasIED SHS-CVR is a custom silicone cover designed to encase the SHS diffuser for clean room applications.

Refer to the SHS-6T2 install sheet, www.atlasied.com/f/6035/she-6t2-install-sheet.pdf, for proper installation of the SHS-6T2 in the ceiling tile.

Once the SHS-6T2 speaker is in place, the SHS-CVR can be installed.

Note: When installing the SHS-CVR, it is recommended the installer wear disposable gloves to keep the SHS-CVR clean.

1. Start by removing the diffuser / flange lens assembly by turning it counter-clockwise until it is removed from the SHS-6T2.
2. Prepare the SHS-CVR by adding a small amount of silicone adhesive (included) to the center, inside of the SHS-CVR.
3. Fit the SHS-CVR to the diffuser / flange lens assembly, ensuring that the SHS-CVR is properly fitted to the edges of the assembly. Press down in the center of the cover to ensure the silicon is smoothed out.
4. Using the silicone adhesive, apply an even layer around the entire ceiling to flange matting surface of the assembly. **Note:** Excessive silicone may weep out while installing.
5. Reattach the diffuser / flange lens assembly to the SHS-6T2 by realigning it to the front of the speaker. Turn clockwise until it is seated in place. The layer of silicone adhesive and flange should be flush with the ceiling tile.
6. Allow up to 12-hours for the silicone adhesive to properly set, ensuring an air-tight seal before using the speaker.

Visit www.vimeo.com/412517297 to view a short video showing installation of the SHS-CVR. Call AtlasIED customer service at 1-800-876-3333 to speak with a technician if you need further assistance.
